PATHOLOGY REPORT

Clinical Information.	Generalized lymphadenopathy.
Nature of specimen.	Tru-cut biopsy from iliac lymph node.

GROSS:

Tissue cores up to 1.3 cm long, totally embedded.

MICROSCOPIC:

Lymph node cores shows caseating granulomas with some epithelioid cells and scattered Langhan's giant cells. Picture is consistent with a tuberculous etiology. No evidence of malignancy.

DIAGNOSIS:

Rt. iliac lymph node core biopsy:

- Caseating granulomatous lymphadenitis, consistent with tuberculous etiology
- Negative for malignancy.

COMMENT

Confirmation of etiology by microbiological studies and skin testing is recommended.
