## PATHOLOGY REPORT

Clinical Information.	Chronic cervicitis with cervical erosion.
Nature of specimen.	Pap smear for cytological examination.

### GROSS:

Three unstained smears were submitted (from endocervix by brushing, by spatula from endocervix and ectocervical smear). All were pap stained.

### MICROSCOPIC:

Smears show unremarkable squamous cells, satisfactory for evaluation with present endocervical / transformation zone components. There is associated moderate inflammatory changes. No evidence of viral, fungal or trichomonal infection. No evidence of atypical or malignant cells.

### DIAGNOSIS:

#### Pap smear, conventional cytology:

- Satisfactory for evaluation.
- Negative for intraepithelial lesion or malignancy (NILM).
- Organisms: None are identified.
