PATHOLOGY REPORT

Clinical Information.	Epigastric pain refractory to treatment.
Nature of specimen.	Gastric and duodenal endoscopic biopsies.

GROSS:

Two samples were submitted:

- (1) Gastric biopsy: Fragments of collective size 6x5 mm.
- (2) Duodenal biopsy: Fragments of collective size 7x5 mm.

MICROSCOPIC:

- (1) Gastric mucosa antral type showing mild atrophy of glands and moderate infiltration by lymphocytes and plasma cells. Some neutrophils are seen infiltrating glands indicating activity. *H. pylori* characteristic forms are seen colonizing glands. No evidence of intestinal metaplasia, atypia or malignancy.
- (2) Duodenal mucosa showing moderate infiltration by lymphocytes and plasma cells with scattered neutropils. Villi are intact and are negative for atrophy and ulceration. No evidence of specific granulomas. No evidence of malignancy.

DIAGNOSIS:

(1) Stomach, endoscopic biopsy:

- ***H. pylori*-associated mild chronic atrophic gastritis with associated minimal activity.**
- **Negative for intestinal metaplasia, dysplasia and malignancy.**

(2) Duodenum, endoscopic biopsy:

- **Moderate chronic non-specific inflammation with mild inflammatory activity.**
- **Negative for villus atrophy.**
- **Negative for dysplasia and malignancy.**
