Pt. Age:	Adult.	Gender:	Male	Received date:	2026-03-02
Referred By:	م/ النيل		Reported date:	2026-03-05	

PATHOLOGY REPORT

Clinical Information.	Knee mass.
Nature of specimen.	Excision biopsy

GROSS:

Fatty soft tissue pieces collectively measured 1.7x1.3x0.8 cm, totally embedded.

MICROSCOPIC:

There is subsynovial connective tissue replaced by mature adipose tissue with mild chronic non specific inflammatory cells. No evidence of specific granulomas. No evidence of atypia or malignancy.

DIAGNOSIS:

Knee soft tissue mass, Excision:

- Synovial lipoma.
- Negative for malignancy.
