PATHOLOGY REPORT

Clinical Information.	Polypoidal circumferential mass involving distal gastric body and antrum.
Nature of specimen.	Endoscopic biopsy.

GROSS:

Soft tissue fragments collectively measured 1 cm, totally embedded.

MICROSCOPIC:

Gastric mucosa showing moderate infiltration by lymphocytes and plasma cells. Some neutrophils are seen infiltrating glands thus indicating activity. H. pylori characteristic forms are seen colonizing glands. No evidence of intestinal metaplasia, atypia or malignancy.

DIAGNOSIS:

Stomach, Endoscopic biopsy:

- H. pylori-associated moderate gastritis with associated moderate inflammatory activity.
- Negative for dysplasia or malignancy in submitted material.
- Given clinical described mass lesion, this biopsy is considered non representative, recommended for re-biopsy.
