## PATHOLOGY REPORT

Clinical Information.	Menorrhagia.
Nature of specimen.	Myomectomy with D & C biopsy.

### GROSS:

Two samples were received:

1- D & C biopsy: soft tissue fragments collectively measured 1.7x1.3x0.5 cm, totally embedded.

2- Myomectomies: multiple fibroid masses collectively measured 9.5x8.5x4 cm, ranging in size from 1 cm to 6x5x4 cm, having rubbery whitish cut section.

### PHOTOGRAPH

### MICROSCOPIC:

1- Endometrium is hyperplastic and non-secretory. It is formed of moderately branching and focally crowded glands separated by cellular stroma and lined by 2-3 layers of cells. Glandular epithelium exhibits focal mild atypia. However, no evidence malignancy. No evidence of complex glandular pattern.

2- Myometrial tumors are benign leiomyomas formed of whorly bundles of mature smooth muscles separated by a fibrous stroma. No evidence of malignancy.

### DIAGNOSIS:

- **Endometrial biopsy & myomectomy:**
- **Moderate simple endometrial hyperplasia with associated mild atypia.**
- **Leiomyomas**
- **Negative for malignancy.**
