Received date:		Reported date:	2026-03-08
Referred By:	د/ عقيل الشامي		

### PATHOLOGY REPORT

Clinical Information.	Small ascendo-cecal ulcer and left-sided colitis.
Nature of specimen.	Endoscopic biopsies.

#### GROSS:

Soft tissue fragments collectively measured 0.8 cm, totally embedded.

#### MICROSCOPIC:

Colonic mucosa showing focal superficial erosion with mild reduction in the number of mucigenic cells and moderate infiltration by lymphocytes, plasma cells and neutrophils. However, crypt abscesses are not identified. No evidence of atypical or malignant cells.

#### DIAGNOSIS:

##### Ascendo-cecal ulcer, Endoscopic biopsy:

- Moderate chronic colitis with minimal inflammatory activity and focal superficial erosion.
- Negative for dysplasia and malignancy.

#### Pathologist

Prof. Dr. Neveen Tahoun, MD, PhD
