## PATHOLOGY REPORT

<b>Clinical Information.</b>	Multiple scattered small colonic ulcers.
<b>Nature of specimen.</b>	Endoscopic biopsies.

### GROSS:

Soft tissue fragments collectively measured 0.7 cm, totally embedded.

### MICROSCOPIC:

Colonic mucosa showing focal superficial erosion with mild reduction in the number of mucigenic cells and moderate infiltration by lymphocytes, plasma cells and neutrophils. However, crypt abscesses are not identified. No evidence of atypical or malignant cells.

### DIAGNOSIS:

#### Colonoscopic biopsy:

- Moderate chronic colitis with focal superficial erosion and minimal inflammatory activity.
- Negative for malignancy.
