<b>Referred By:</b>	م/ الزیلعی		<b>Reported date:</b>	2026-03-12	

## PATHOLOGY REPORT

<b>Clinical Information.</b>	Known Multiple Hereditary Exostoses (MHE) presented with a one-week history of severe pain and tenderness in her left fourth finger, leading to the excision of a bony exostosis to rule out suspected malignant transformation.
<b>Nature of specimen.</b>	Excision biopsy

### GROSS:

Bony fragment measured 1.3x1x0.7 cm, totally embedded.

### MICROSCOPIC:

A polypoid bone tumor covered by a cap of hyaline cartilage of varying thickness and showing a core of cancellous bone. No evidence of specific granulomas. No evidence of malignancy.

### DIAGNOSIS:

Lt fourth finger mass, Excision Biopsy:

- Osteochondroma.
- Negative for malignancy.
