Pt. Age:	30 years.	Gender:	Female
Received date:		Reported date:	2026-03-12
Referred By:	أ.د/ أمة الكريم الحوري		

PATHOLOGY REPORT

Clinical Information.	Patient underwent a myomectomy with dilation and curettage for a delivered prolapsed myoma
Nature of specimen.	Myomectomy

GROSS:

Single, solid, and rubbery soft tissue mass measuring 3.5 x 3 x 2 cm. Additionally received are multiple separate bloody pieces of soft tissue measuring 2.5 x 2 x 1 cm in aggregate.

MICROSCOPIC:

Polypoid lesion composed of irregular, branching and focally endometrial glands lined by 1-3 layers of non-secretory columnar cells. Separating stroma is abundant and contains bundles of smooth muscles. No evidence of atypia or malignancy. Polypectomy: Adenomyomatous polyp.

Non-secretory endometrium formed of branching glands lined by 1-2 layers of cells. Stroma is cellular. Picture is consistent with anovulatory cycle. No evidence of endometritis.

DIAGNOSIS:

Myomectomy with D & C biopsy:

- Adenomyoma, negative for malignancy.
- Disordered proliferative endometrium (anovulatory cycle).
