PATHOLOGY REPORT

Clinical Information.	Friable easily bleeds, fungating ulcerating tumor partially occluding the rectal lumen. Bleeding per rectum.
Nature of specimen.	Endoscopic biopsy.

GROSS:

Fragments of collective size 4x4 mm.

MICROSCOPIC:

Partially ulcerated colonic mucosa shows underlying invasive carcinoma formed of irregular and crowded glands with lining by non-mucigenic malignant columnar cells exhibiting moderate anaplasia & mitosis. There are areas of extracellular mucin.

DIAGNOSIS:

Rectal mass, endoscopic biopsy:

- Adenocarcinoma with mucinous areas, grade 2.
