### PATHOLOGY REPORT

<b>Clinical Information.</b>	Right inguinal lymph node enlargement.
<b>Nature of specimen.</b>	Excision biopsy.

#### GROSS:

Multiple lymph nodes, the largest of which measured 2x1.5x1 cm, totally embedded.

#### MICROSCOPIC:

Sections show lymph nodes showing lost architecture and replacement by a vague nodular infiltrate of dominantly large atypical lymphoid cells some are non-cleaved but centroblasts forming >15 cells/ HPF. Case is consistent with follicle lymphoma. Recommend for marker study for confirmation and exact grading (CD20, CD3, BCL2, BCL6, CD10, Ki-67).

#### DIAGNOSIS:

##### *Rt. inguinal lymph nodes, excision biopsy:*

- Atypical lymphoid infiltrate, consistent with follicle lymphoma.
- Recommend for marker study for confirmation and exact grading (CD20, CD3, BCL2, BCL6, CD10, Ki-67)
