PATHOLOGY REPORT

Clinical Information.	Large ulcer at the rectosigmoid junction.
Nature of specimen.	Endoscopic biopsy.

GROSS:

Soft tissue fragments collectively measured 0.8x0.7 cm, totally embedded.

MICROSCOPIC:

Submitted biopsy showing focally ulcerated rectal mucosa with focally reduced mucigenic cells and moderate infiltration by lymphocytes, plasma cells and neutrophils. There is associated fibrosis. No evidence of crypt abscesses. No evidence of specific granulomas. No evidence of atypia or malignancy. Picture is consistent with solitary rectal ulcer.

DIAGNOSIS:

Large ulcer at the rectosigmoid junction, Endoscopic Biopsy:

- Active inflammatory ulceration with fibrosis, consistent with solitary rectal ulcer.
- Negative for malignancy.
- Recommended for follow up.
