

Pt. Name:	الشريف محمد أحمد قايد		Lab Number:	1636-2026	
Pt. Age:	75 years.	Gender:	Male	Received date:	2026-03-11
Referred By:	د/ جميلة النهمي		Reported date:	2026-03-30	

PATHOLOGY REPORT

Clinical Information.	Referred paraffin block for immunostaining of anorectal mass.
Nature of specimen.	Referred paraffin block for immunohistochemistry

GROSS:

One referred paraffin block of previously submitted case number 1511.

MICROSCOPIC:

Round cells show:

CD20 shows focal positive reaction.

CD3 shows focal positive reaction.

CK20 is negative.

Synaptophysin is negative.

SOX-10 is negative.

SATB-2 is negative.

p63 is negative

Ki-67 LI is less than 3%.

DIAGNOSIS:

Rectal mass, endoscopic biopsy, immunostaining:

- Exuberant inflammatory process with septic granulation tissue.
- Negative for malignancy in submitted material.
- Recommended for follow up (see comment).

COMMENT:

This pattern of immunostaining is excluding carcinoma, NHL and melanoma in submitted material. Such immunoreaction is rather consistent with an exuberant inflammatory process. Follow up endoscopy to ensure regressive course of these ulcers is essential to ensure the suggested inflammatory nature. If malignancy is still suspected, rebiopsy will be advised.
