<b>Referred By:</b>	د / عبد السلام		<b>Reported date:</b>	2026-03-18	

## PATHOLOGY REPORT

<b>Clinical Information.</b>	Nasopharyngeal mass.
<b>Nature of specimen.</b>	Biopsy.

### GROSS:

Soft tissue fragments measuring in aggregate 4 x 3.5 x 1 cm, totally embedded.

### MICROSCOPIC:

Submitted material showing subepithelial sheets of diffuse population of large round cells with vesicular nuclei and active mitosis. Main possibility is diffuse large cell non-Hodgkin's lymphoma. For confirmation of this diagnosis and definitive exclusion of undifferentiated carcinoma, marker study (CK, LCA and CD20) is needed.

### DIAGNOSIS:

#### Nasopharyngeal mass, biopsy:

- Undifferentiated malignant large round cell tumor, high grade.
- Recommended for typing by marker study.
