

Pt. Name:	أصيلة حسن ناجي البرعي		Lab Number:	1651-2026	
Pt. Age:	Adult.	Gender:	Female	Received date:	2026-03-15
Referred By:	د/ ريهام الحميري		Reported date:	2026-03-18	

PATHOLOGY REPORT

Clinical Information.	Adnexal mass.
Nature of specimen.	Excision biopsy.

GROSS:

Soft mass measures 1x0.7x0.5 cm.

MICROSCOPIC:

Sections from ovarian tumor show complete replacement by a hemorrhagic structureless tissue. Subcapsular part of mass show ghosts of bland looking spindle cells suggesting an underlying fibroma. No evidence of viable tissues and no evidence of malignancy.

DIAGNOSIS:

Adnexal mass, excision biopsy:

- Consistent with strangulated fibroma with hemorrhagic infarction.
- Negative for malignancy.
