PATHOLOGY REPORT

Clinical Information.	Thyroglossal cyst.
Nature of specimen.	Excision of neck cyst (Sistrunk operation)

GROSS:

Soft tissue fragment 3x2x1 cm with covering skin.

MICROSCOPIC:

Soft tissues of neck show a tubular structure lined by simple or stratified columnar epithelium. Lining is focally ulcerated with related moderate inflammatory reaction. No evidence of thyroid follicles. No evidence of malignancy.

DIAGNOSIS:

Neck cyst, excision:

- Thyroglossal duct cyst, inflamed.
- Negative for tumors.
