PATHOLOGY REPORT

Clinical Information.	Paraffin block of an endoscopic gastric biopsy of a gastric mass for Immunohistochemistry.
Nature of specimen.	Referred paraffin block and slides

GROSS:

Received one paraffin block and two H&E stained slides coded S 5841-2025 for immunohistochemistry.

MICROSCOPIC:

Submitted fragments showing focally ulcerated gastric mucosa with related an invasive tumor composed of sheets and solid groups of large malignant epithelial cells exhibiting moderate to marked degree of anaplasia. There is focal poor glandular differentiation. Superimposed inflammatory cell infiltrate is encountered. Tumor cells exhibits diffuse positive cytoplasmic staining for CK, whereas negative to CD20 and CD3.

DIAGNOSIS:

Gastric mass, endoscopic biopsy, referred paraffin block and slides for review and immunostaining:

- Poorly cohesive carcinoma, non-signet ring type.
