PATHOLOGY REPORT

Clinical Information.	Cervicitis.
Nature of specimen.	Pap smear for cytology examination.

GROSS:

Two unstained smears were submitted labeled as endocervical and Ectocervical smears, both were stained with pap.

MICROSCOPIC:

Smears shows unremarkable squamous cells, satisfactory for evaluation with present endocervical / transformation zone components. There is no associated inflammatory changes and clue cells are identified. . No evidence of viral, fungal, or trichomonal infection. No evidence of atypical or malignant cells.

DIAGNOSIS:

Pap smear, conventional cytology:

- Satisfactory for evaluation.
- Negative for intraepithelial lesion or malignancy (NILM).
- Organisms: None.
- Mild neutrophilic infiltrate.
- Clue cells are not identified.
