PATHOLOGY REPORT

Clinical Information.	20-year history of a left conjunctival mass involving the eyelids.
Nature of specimen.	Biopsy

GROSS:

Soft tissue fragments collectively measured 1x0.8x0.6 cm, totally embedded.

MICROSCOPIC:

Focally ulcerated mucosal fragments by an invasive carcinoma formed of solid groups of minimally keratinized basaloid squamous cells exhibiting moderate anaplasia and mitosis associated with marked stromal infiltration by lymphocytes, plasma cells and histiocytes. Periphery of tumor masses showing focal palisading. No evidence of surrounding tissue free margins.

DIAGNOSIS:

Conjunctival mass, biopsy:

- Squamous cell carcinoma, basaloid type, grade 3.
