

Pt. Name:	سلوى أحمد عبد الله البعداني		Lab Number:	1934-2026	
Pt. Age:	38 years.	Gender:	Female	Received date:	2026-04-04
Referred By:	د/ شكيب القباطي		Reported date:	2026-04-05	

PATHOLOGY REPORT

Clinical Information.	The patient presents with a left breast mass accompanied by nipple retraction and multiple nodular skin lesions over the breast that are suspected to be metastases.
Nature of specimen.	Excision biopsy.

GROSS:

Received two skin ellipses measuring 1.8 x 1.5 x 0.7 cm in aggregate.

MICROSCOPIC:

- **Specimen:** Skin ellipses.
- **?Histologic Type:** Invasive carcinoma of no special type (NST) / Invasive ductal carcinoma
- **?Histologic Grade (Nottingham Histologic Score):** Grade 2
- **?Tumor Extension:** Tumor extends into the dermis of the skin; no epidermal invasion is identified
- **?Margins:** Cannot be assessed (due to the fragmented nature of the received specimen)
- **?Lymphovascular Invasion (LVI):** Present
- **?Perineural Invasion (PNI):** Not identified

DIAGNOSIS:

Left breast skin nodules, excision biopsy:

- **Invasive carcinoma of no special type (invasive ductal carcinoma), grade 2, involving the dermis with lymphovascular invasion.**
