PATHOLOGY REPORT

Clinical Information.	Appendicular mass.
Nature of specimen.	Appendicectomy

GROSS:

Appendicectomy specimen measured 8.5 cm long with attached mesenteric fat measuring 5.5 x 3 cm, showing mucosal ulceration with wall thickness up to 0.4 cm.

MICROSCOPIC:

Appendicular lumen is full of neutrophils that extend into wall in between the mucosal associated lymphoid tissue together with lymphocytes and plasma cells. Such infiltrate extends to periappendicular fat, amounting at abscess formation. Impacted fecolith is noted. No evidence of specific granulomas. No evidence of appendicular tumors.

DIAGNOSIS:

Appendicectomy:

- Acute (suppurative) on top of chronic appendicitis with periappendicitis with perforation and abscess formation.
- Negative for malignancy.
