Referred By:	د/ عمر نصار		

PATHOLOGY REPORT

Clinical Information.	Right thyroid nodules.
Nature of specimen.	Thyroid FNAC.

GROSS:

Submitted 8 unstained smears, pap stained.

MICROSCOPIC:

Smears are hemorrhagic and show abundant thin and thick colloid and scattered bland looking follicular cells. Background also shows scattered hemosiderin-laden macrophages, and lymphocytes. Follow up (clinical and sonographic) is recommended. No evidence of atypical or malignant cells.

DIAGNOSIS:

Rt. Thyroid nodules, guided FNAC:

- Benign cytology.
- Negative for malignant cells.
- Consistent with colloid nodules (Bethesda class II).

Comment:

According to Bethesda System for Reporting Thyroid Cytology (BSRTC), for colloid nodule (benign cytology, Bethesda category II), the risk of malignancy is 0-3%, follow up both (Clinically and radiologically) is recommended.
