## PATHOLOGY REPORT

Clinical Information.	Erosive gastritis.
Nature of specimen.	Endoscopic biopsies.

### GROSS:

Soft tissue fragments collectively measured 0.5 cm, totally embedded.

### MICROSCOPIC:

Gastric mucosa body type showing superficial erosions and moderate infiltration by lymphocytes and plasma cells. Neutrophils are seen infiltrating glands thus indicating activity. H. pylori characteristic forms are seen colonizing glands. No evidence of intestinal metaplasia, atypia or malignancy.

### DIAGNOSIS:

#### Stomach, endoscopic biopsy:

- H. pylori associated chronic erosive gastritis with associated mild inflammatory activity.
- Negative for atypia or malignancy.

### Pathologist
