PATHOLOGY REPORT

Clinical Information.	Bleeding per rectum. Colonoscopy: scattered superficial ulcers at the distal sigmoid colon with congestion surrounding mucosa.
Nature of specimen.	Endoscopic biopsies.

GROSS:

Four soft tissue fragments collectively measured 0.8 cm, totally embedded.

MICROSCOPIC:

Intact colonic mucosa with mild reduction in the number of mucigenic cells and moderate infiltration by lymphocytes, plasma cells and neutrophils. Focal superficial erosions are seen. However, crypt abscesses are not identified. No evidence of specific granulomas. No evidence of atypical or malignant cells.

DIAGNOSIS:

Colon, endoscopic biopsy:

- Moderate chronic colitis with minimal inflammatory activity and focal superficial erosion.
- Negative for malignancy.
