Referred By:	د/ عادل الميديمه		Reported date:	2026-04-08	

PATHOLOGY REPORT

Clinical Information.	Abdominal pain. Endoscopy: the apparent mucosa of the transvers and descending colon is edematous with loss of vascular pattern. Entamoeba vermicularis worms is seen.
Nature of specimen.	Endoscopic biopsies.

GROSS:

Received multiple fragments of white-tan tissue measuring in aggregate 1.4 cm, totally embedded in one cassette.

MICROSCOPIC:

Intact colonic mucosa with mild reduction in the number of mucigenic cells and moderate infiltration by lymphocytes, plasma cells and neutrophils. However, crypt abscesses are not identified. No evidence of atypical or malignant cells.

DIAGNOSIS:

Colon, endoscopic biopsy:

- Moderate chronic colitis with minimal inflammatory activity.
- Negative for malignancy.
