Referred By:	د/ علي سالم		Reported date:	2026-04-08	

PATHOLOGY REPORT

Clinical Information.	Small scalp mass.
Nature of specimen.	Excision biopsy.

GROSS:

Two fragments of collective size 1.7x1.3x0.7 cm partially covered by skin.

MICROSCOPIC:

Subcutaneous non-capsulated hamartoma formed of intercommunicating microcystic vascular channels separated by incomplete and thick fibrous septa. Spaces are empty and lined by mature endothelium. No evidence of atypia or malignancy.

DIAGNOSIS:

Scalp mass, excision biopsy:

- Lymphovascular hamartoma.
- Negative for atypia.
