

Pt. Name:	أمين مثنى صالح ناجي		Lab Number:	2016-2026	
Pt. Age:	53 years.	Gender:	Male	Received date:	2026-04-03
Referred By:	د/ طارق السقاف		Reported date:	2026-04-09	

PATHOLOGY REPORT

Clinical Information.	Palatal ulcer.
Nature of specimen.	Immunohistochemistry.

GROSS:

One referred paraffin block and one H&E slide of previously submitted case with pathology number (1297-2026).

MICROSCOPIC:

CD20: Stained very occasional cells.

CD3: Stained scattered cells.

CD68: Stained many inflammatory cells.

CK: Stained only intact surface epithelium and scattered entrapped epithelial cells within inflammatory infiltrate.

Ki-67: Labeled about 7 % of cells in hot spots.

DIAGNOSIS:

Palatal ulcer, biopsy and immunostaining:

- Active inflammatory ulceration with exuberant inflammatory cells infiltrate.
- Negative for malignancy.
- Recommended for follow up.

COMMENT:

Follow up till complete subsidence of inflammatory process and if inflammation is progressive or resistant, complete excision of the ulcer is recommended to avoid missing of underlying unsampled more serious pathology.
