PATHOLOGY REPORT

Clinical Information.	Urinary bladder mass.
Nature of specimen.	Cystoscopic biopsy.

GROSS:

Soft tissue fragments collectively measuring 2 x 1.8 x 0.6 cm, totally embedded.

MICROSCOPIC:

Papillary urothelial tumor formed of thin fibrovascular cores covered by multiple layers of malignant transitional epithelial cells of mild to moderate degree of anaplasia and mitosis. Lamina propria shows early infiltration. Muscularis propria is not included in submitted material; hence proper assessment of stage of tumor is not possible.

DIAGNOSIS:

Urinary bladder, mass, cystoscopic biopsy:

- Papillary transitional cell carcinoma, grade 1.
- No muscles included in this biopsy to assess stage of disease.
