## PATHOLOGY REPORT

Clinical Information.	Pan-colitis.
Nature of specimen.	Endoscopic biopsies.

### GROSS:

Two biopsies were submitted:

- 1- Rt colon: soft tissue fragments collectively measured 1 cm, totally embedded.
- 2- Lt colon: soft tissue fragments collectively measured 1 cm, totally embedded.

### MICROSCOPIC:

Intact colonic mucosa with mild reduction in the number of mucigenic cells and moderate infiltration by lymphocytes, plasma cells and neutrophils. However, crypt abscesses are not identified. No evidence of atypical or malignant cells.

### DIAGNOSIS:

*Rt and Lt colon, endoscopic biopsies:*

- Moderate chronic colitis with minimal inflammatory activity.
- Negative for atypia and malignancy.
