PATHOLOGY REPORT

Clinical Information.	Radicular cyst.
Nature of specimen.	Excision biopsy.

GROSS:

One soft tissue fragment measured 0.7x0.6x0.5 cm, with attached tooth.

MICROSCOPIC:

Fibrotic tissue fragments show moderate to dense infiltration formed of plasma cells, lymphocytes and neutrophils with related vascular endothelial proliferation. No evidence of epithelial component. No evidence of specific granulomas. No evidence of malignancy.

DIAGNOSIS:

Tooth related cyst, excision:

- Periapical abscess.
- Negative for malignancy.
