PATHOLOGY REPORT

Clinical Information.	Pilonidal sinus.
Nature of specimen.	Cytology

GROSS:

One smear was prepared and pap stained from submitted 2 ml reddish fluid.

MICROSCOPIC:

The smears are hypercellular, characterized by a dense infiltrate of neutrophils and scattered macrophages set against a background of red blood cells, fibrin, and granular proteinaceous debris. Focal collections of anucleate squamous material and amorphous necrotic matter are present. No evidence of malignancy is observed.

DIAGNOSIS:

Pilonidal Sinus (Evacuation):

- Acute suppurative inflammation and cell debris (consistent with abscess); negative for malignant cells.
