## PATHOLOGY REPORT

<b>Clinical Information.</b>	Post-coital bleeding and profuse purulent discharge.
<b>Nature of specimen.</b>	Pap smear for cytology examination.

### GROSS:

Six unstained smears were submitted and pap stained.

### MICROSCOPIC:

Smear shows unremarkable squamous cells, satisfactory for evaluation with present endocervical / transformation zone components. There is associated Moderate inflammatory changes without identified clue cells. Monilia hyphae and spore forms are identified. No evidence of viral or trichomonal infection. No evidence of atypical or malignant cells.

### DIAGNOSIS:

#### Pap smear, conventional cytology:

- Satisfactory for evaluation.
- Negative for intraepithelial lesion or malignancy (NILM).
- Organisms: Monilia.
- Moderate neutrophilic infiltrate.
- Clue cells are not identified.
