Referred By:	O.p		Reported date:	2026-01-12	

PATHOLOGY REPORT

Clinical Information.	Upper left second molar lesion.
Nature of specimen.	Excision.

GROSS:

One soft tissue fragment measured 0.8x0.7x0.6 cm (totally embedded) with attached tooth.

PHOTOGRAPH

MICROSCOPIC:

Polypoid lesion covered by completely ulcerated surface epithelium. Core is fibrotic showing marked vascular endothelial proliferation with dense infiltration by small lymphocytes and plasma cells. No evidence of specific granulomas. No evidence of atypia or malignancy.

DIAGNOSIS:

Upper Lt. Second molar lesion, excision:

- Inflammatory epulis.
- Negative for malignancy.
