PATHOLOGY REPORT

Clinical Information.	Rectosigmoid mass.
Nature of specimen.	Endoscopic biopsy

GROSS:

Soft tissue fragments collectively measured 0.8 cm, totally embedded.

MICROSCOPIC:

Fragments of rectosigmoid mucosa with mild to moderate chronic inflammatory infiltrate composed of lymphocytes and plasma cells. There is no evidence of active cryptitis, crypt abscesses, or granulomas. No dysplasia, or malignancy is identified in the submitted tissue.

DIAGNOSIS:

Rectosigmoid mass, endoscopic biopsy:

- Chronic non specific colitis (non representative)
- Recommended for rebiopsy

Comment:

Given endoscopic findings regarding presence of mass lesion this biopsy is considered non representative and rebiopsy is recommended.
