### PATHOLOGY REPORT

Clinical Information.	Edematous gastric mucosa with lacerations.
Nature of specimen.	Endoscopic biopsies.

#### GROSS:

Soft tissue fragments collectively measured 0.7 cm, totally embedded.

#### MICROSCOPIC:

Gastric antral type mucosa showing moderate atrophy of glands and moderate infiltration by lymphocytes and plasma cells. There is evidence of inflammatory activity manifested by few neutrophils infiltrating glands, however H. pylori characteristic forms are seen. No evidence of intestinal metaplasia, atypia or malignancy.

#### DIAGNOSIS:

##### Stomach, Endoscopic biopsy:

- H pylori associated moderate chronic atrophic gastritis with associated moderate inflammatory activity.
- Negative for atypia and malignancy.

#### Pathologist

Prof. Dr. Neveen Tahoun, MD, PhD
