Referred By:	م / التخصصي		Reported date:	2026-04-13	

### PATHOLOGY REPORT

Clinical Information.	Cervicitis.
Nature of specimen.	Biopsy

#### GROSS:

Soft tissue fragments collectively measured 1x0.7x0.4 cm, totally embedded.

#### MICROSCOPIC:

Polypoid fragments of endocervical epithelium with superficial erosion and related focal infiltration by inflammatory cells. No evidence of specific granulomas. No evidence of atypia or malignancy.

#### DIAGNOSIS:

##### Cervix, biopsy:

- Polypoid endocervicitis with superficial erosion.
- Negative for atypia.

#### Pathologist

Prof. Dr. Neveen Tahoun, MD, PhD
