<b>Referred By:</b>	د/ ليلي العماري		<b>Reported date:</b>	2026-04-13	

### PATHOLOGY REPORT

<b>Clinical Information.</b>	Cervical polyp.
<b>Nature of specimen.</b>	Polypectomy

#### GROSS:

Cervical polyp received as 2 soft tissue fragments collectively measured 1.3x1x0.7 cm, totally embedded.

#### MICROSCOPIC:

Polypoid lesion composed of hyperplastic endocervical mucous glands and Nabothian cysts, covered by partially ulcerated columnar endocervical epithelium. Stroma is fibrotic and vascular and shows moderate infiltration by inflammatory cells. Areas of reserve cells hyperplasia are seen. No evidence of atypia or malignancy.

#### DIAGNOSIS:

##### Cervical polypectomy:

- Inflamed hyperplastic endocervical polyp with Nabothian cysts and focal reserve cells hyperplasia.
- Negative for atypia.
