PATHOLOGY REPORT

Clinical Information.	Vaginal discharge.
Nature of specimen.	Pap smear for cytology.

GROSS:

Three unstained smear were received and stained with pap.

MICROSCOPIC:

Smears showing squamous cells mainly parabasal with few intermediate and superficial cells. Some maturing metaplastic squamous cells and endocervical cells are seen. Smears are satisfactory for evaluation. There is associated moderate inflammatory changes. Monilial spore and hyphae are identified. No evidence of viral or trichomonal infection. No evidence of atypical or malignant cells.

DIAGNOSIS:

Pap smear, conventional cytology:

- Satisfactory for evaluation.
- Atrophic menopausal pattern.
- Negative for intraepithelial lesion or malignancy (NILM).
- Organisms: Moniliasis.
