PATHOLOGY REPORT

Clinical Information.	Active chronic suppurative otitis media with a right middle ear polyp and mucopurulent discharge.
Nature of specimen.	Biopsy

GROSS:

One soft tissue fragment measured 0.4x0.3x0.2 cm, totally embedded.

MICROSCOPIC:

Sections show fragmented polypoid tissue lined by extensively ulcerated respiratory epithelium. The underlying edematous fibrovascular stroma exhibits prominent granulation tissue heavily infiltrated by a mixed acute and chronic inflammatory infiltrate composed of lymphocytes, plasma cells, histiocytes, and neutrophils. No granulomas, dysplasia, or malignancy are observed.

DIAGNOSIS:

Right Middle Ear Polyp, Excision:

- Inflammatory aural polyp consistent with active Chronic Suppurative Otitis Media.
- Negative for malignancy.
