PATHOLOGY REPORT

Clinical Information.	Referred paraffin block for immunostaining of left breast skin nodules diagnosed as invasive ductal carcinoma grade 2 on 5 April 2026 (pathology number 1934-2026)
Nature of specimen.	Immunohistochemistry

GROSS:

One referred paraffin block and one Hx&E stained slide coded 1934-2026.

MICROSCOPIC:

Immunostaining was done using appropriate positive and negative controls and revealed:

- Estrogen receptor: strong intensity in 95% of tumor cells; positive Allered score 8/8.
- Progesterone receptor: strong intensity in 80% of tumor cells; positive Allered score 8/8.
- Her2/neu: negative score 0.
- Ki-67 proliferation index about 70%.

DIAGNOSIS:

Immunostaining of left breast skin nodules:

- ER & PR positive.
- Her2/neu negative.
- Ki-67 labeling index about 70%.
