## PATHOLOGY REPORT

<b>Clinical Information.</b>	Cervical polyp.
<b>Nature of specimen.</b>	Polypectomy

### GROSS:

Soft tissue fragment measured 2.5x2x1.5 cm, totally embedded.

### MICROSCOPIC:

Submucosal benign tumor composed of uniform spindle cells arranged in intersecting fascicles. The cells feature abundant eosinophilic cytoplasm and central, blunt-ended nuclei. Atypia, pleomorphism, necrosis, and increased mitotic activity are absent.

### DIAGNOSIS:

#### Cervical polypectomy:

- Leiomyomatous polyp.
- Negative for malignancy.
