PATHOLOGY REPORT

Clinical Information.	Endoscopic biopsy from rectum, ? ulcerative colitis.
Nature of specimen.	Endoscopic biopsy

GROSS:

Soft tissue fragments collectively measured 1 cm, totally embedded.

MICROSCOPIC:

Rectal mucosa showing focal superficial erosion with mild reduction in the number of mucigenic cells and moderate infiltration by lymphocytes, plasma cells and neutrophils. However, crypt abscesses are not identified. No evidence of atypical or malignant cells.

DIAGNOSIS:

Rectum, colonoscopic biopsy:

- Moderate chronic proctitis with inflammatory activity and focal superficial erosion.
- Negative for atypia and malignancy.
