| <b>Pt. Age:</b>     | Adult.                | <b>Gender:</b> | Female                | <b>Received date:</b> | 2026-04-11 |
| <b>Referred By:</b> | د/عمار قداري          |                | <b>Reported date:</b> | 2026-04-15            |            |

### PATHOLOGY REPORT

|                              |  |
|------------------------------|--|
| <b>Clinical Information.</b> | Calcified intensely enhancing extra-axial mass at the left frontotemporal dural base (suggestive of a sphenoid wing meningioma, with lymphoma as a differential), which is causing marked mass effect (compression of the left lateral ventricle and a rightward midline shift) and associated brain edema, with an area of fibrous dysplasia involving the right sphenoid wing. |
| <b>Nature of specimen.</b>   | Excision   |

#### GROSS:

Soft tissue fragments collectively measured 5.5x5x2 cm, totally embedded.

#### MICROSCOPIC:

A benign tumor formed of proliferating meningotheial cells with focal whorling. Cytoplasm is eosinophilic and abundant and cell borders are ill-defined. No evidence of atypia or malignancy. This is a WHO grade I meningioma

#### DIAGNOSIS:

Left fronto-temporal extra-axial mass:

- Meningotheial meningioma (WHO grade I).
