PATHOLOGY REPORT

Clinical Information.	Postmenopausal bleeding and a thick endometrium.
Nature of specimen.	Total hysterectomy with Rt. salpingoophorectomy

GROSS:

Total abdominal hysterectomy with Rt. salpingoophorectomy: the uterus measured 8 x 5 x 3 cm, with a cervix measuring 3 cm. Upon sectioning, the myometrial wall thickness was 1.5 cm, and the endometrium measured 0.3 cm in thickness. The attached right fallopian tube measured 5 cm, and the right ovary measured 2 x 1.5 x 1 cm.

MICROSCOPIC:

Endometrium shows hyperplastic endometrial glands, is non-secretory, it is formed of moderately cystic glands lined by 1-2 layers of cells. Stroma is cellular. No evidence of complex glandular pattern. Some of the hyperplastic endometrium are seen embedded within superficial myometrium. Cervix is unremarkable. Rt. ovary shows cystic follicles. Fallopian tube is unremarkable. No evidence of atypia or malignancy.

DIAGNOSIS:

Total hysterectomy with unilateral salpingo-oophorectomy:

- Moderate cystic simple endometrial hyperplasia without atypia
- Superficial adenomyosis
- Rt. ovarian cystic follicles.
- Fallopian tubes are unremarkable.
- Negative for malignancy.
