Referred By:	م / الجمهوري		Reported date:	2026-04-17	

PATHOLOGY REPORT

Clinical Information.	Large Pericoronitis, retromolar mandibular biopsy.
Nature of specimen.	Biopsy

GROSS:

Soft tissue fragment measured 0.8x0.7 cm, totally embedded.

MICROSCOPIC:

Polypoid lesion covered by focally ulcerated squamous epithelium. Core is fibrotic showing marked vascular endothelial proliferation with dense infiltration by small lymphocytes and plasma cells. No evidence of specific granulomas. No evidence of atypia or malignancy.

DIAGNOSIS:

Retromolar mandibular biopsy, excision biopsy:

- Inflammatory epulis
- Negative for malignancy.
