MICROSCOPIC:

Myometrial tumor is benign leiomyoma formed of whorly bundles of mature smooth muscles separated by a fibrous stroma. Sections show focal increased cellularity with mitotic count 2/10 HPF, however no evidence of atypia or tumor necrosis. No evidence of malignancy. Endometrium, cervix and fallopian tubes are unremarkable. Both ovaries show cystic follicles.

DIAGNOSIS:

Panhysterectomy for uterine mass:

- Cellular leiomyoma.
- Negative for malignancy.
- Recommended for follow-up.

COMMENT:

The majority of these tumors will behave in a benign fashion. However, some will show a more aggressive behavior; hence, a long-term follow-up policy is advised.
