Received date:		Reported date:	2026-04-18
Referred By:	د/ صلاح أحمد عبد الله		

## PATHOLOGY REPORT

Clinical Information.	Long history of lower urinary tract symptoms, with a suspected diagnosis of benign prostatic hyperplasia or prostate cancer.
Nature of specimen.	Trans-rectal prostatic biopsy

### GROSS:

Tissue cores up to 1.8 cm long.

### MICROSCOPIC:

Nodular hyperplasia of prostatic glands and the fibromuscular stroma. Glands exhibit focal cystic change with epithelial infoldings. The normal lobular pattern is preserved and cytologic features are unremarkable. Stroma shows marked infiltration by neutrophils, lymphocytes and plasma cells amounting at multiple microabscesses formation. No evidence of specific granulomas. No evidence of malignancy.

### DIAGNOSIS:

Prostatic gland, TRUS guided core biopsies:

- Nodular adenofibromyomatous hyperplasia with marked non-specific prostatitis and microabscesses formation.
- Negative for malignancy.
