### PATHOLOGY REPORT

<b>Clinical Information.</b>	Abdominal pain demonstrating findings suggestive of gastroenteritis complicated by an intussusception and enlarged mesenteric lymph nodes.
<b>Nature of specimen.</b>	LN dissection

#### GROSS:

Five lymph nodes collectively measured 2.2x1.7x1 cm, totally embedded.

#### MICROSCOPIC:

Lymph nodes shows preserved normal nodal pattern and hyperplasia of the lymphoid follicles which retain active and intact germinal centers with tingible body macrophages. There is associated inflammatory cell infiltrate in subcapsular areas of lymph node with extension into perinodal fibrofatty tissue. No evidence of specific granulomas. No evidence of malignancy.

#### DIAGNOSIS:

##### Mesenteric lymph nodes, excision biopsy:

- Reactive follicular lymphoid hyperplasia with chronic non-specific lymphadenitis and periadenitis.
- Negative for malignancy.
