Referred By:	د/ مطهر مرشد		

PATHOLOGY REPORT

Clinical Information.	Chronic epigastric pain. Endoscopy: severe gastric mucosal hyperemia, edema, and erosio with antral granularity.
Nature of specimen.	Endoscopic biopsies.

GROSS:

Soft tissue fragments collectively measured 0.8 cm, totally embedded in one cassette.

MICROSCOPIC:

Gastric mucosa showing superficial erosions and marked infiltration by lymphocytes and plasma cells. Lymphocytes aggregate in some foci to form lymphoid follicles. Neutrophils are seen infiltrating glands thus indicating activity. H. pylori characteristic forms are present. There is no evidence of intestinal metaplasia, atypia or malignancy.

DIAGNOSIS:

Stomach, endoscopic biopsies :

- H. pylori associated chronic follicular erosive gastritis with moderate inflammatory activity.
- Negative for dysplasia or malignancy
